

CAMRADATA Independent Quantative Universe Report

Sep 2021

Clear and Independent

Institutional Investment Analysis

We provide institutional investors, including pension funds, insurance companies and consultants, with data and analysis to assess, research and report on their investments. We are committed to fostering and nurturing strong, productive relationships across the institutional investment sector and are continually innovating new solutions to meet the industry's complex needs.

We enable institutional investors, including pension funds, insurance companies and consultants, to conduct rigorous, evidence-based assessments of more than 5,000 investment products offered by over 700 asset managers.

Additionally, our software solutions enable insurance companies to produce consistent accounting, regulatory and audit-ready reports.

The CAMRADATA Independent Quantitative (IQ) scores is a ranking reflecting five statistical factors measured over a three year period. Each factor generates a statistic which is shown as a percentage or a number in the table.

To rank products, the percentile ranking of each factor is determined and an overall master score is calculated. This is a simple average of all percentile rankings for each product across all five factors. Investment products which share the same value for a factor are assigned the same percentile rank within that factor.

The highest scoring products appear at the top of the table. For presentational purposes we apply a 'unique sort' to pick out only the best product for each manager.

The five statistical factors that make up the CAMRADATA IQ score are:

Excess Return

A measure of overall added value. The underlying factor is the annualised excess return over the benchmark.

Information Ratio

A measure of efficiency. The Information Ratio is the return added by the asset manager for each one per cent of risk being taken over the benchmark. Therefore the higher the Information Ratio the more return being added for the one percent of risk being taken. The underlying factor is calculated by taking the excess return and dividing it by the excess risk.

Wins-Losses

A measure of the bet structure which a manager is taking. The underlying factor is calculated by taking the average positive relative returns away from the average negative relative returns. Investors use this to identify managers with a low frequency of winning but with a high payoff when a product beats the benchmark. Investors want to see that wins (positive returns) are greater than losses (negative returns); even if the wins are infrequent.

Hit Rate

A measure of consistency. The underlying factor is the percentage of times the manager beats the benchmark. Generally you should expect a manager with strong consistency of beating the benchmark to have a probability of beating it greater than 50%.

Drawdown Strength

A measure of downside management. This measures a product's worst observed 12 month risk adjusted relative return. It is in effect analysing the worst Information Ratio for each product in any 12 month period during the three years being measured. More credit is given to asset managers who have had positive 12 month risk adjusted relative returns and who took less risk to achieve it. Whilst during a 12mth period of negative returns, more credit is given to those asset managers who took more risk showing they were actively managing their products rather than being passive during these times.

Our Services

Evaluation Service

Increasingly institutional investors are expecting a greater level of involvement in investment decision-making processes. Our Evaluation Service gives institutional investors clear, insightful investment analysis to aid better-informed and joined up discussions with asset managers.

Consultancy Service

Whether your company is developing a new investment strategy, conducting a manager search or considering a new market to enter, you will require specific data to answer key strategic questions. Our Consultancy Service provides data analytics and bespoke reports, to meet your exact requirements.

Solutions Service

Solvency II reporting requirements mean insurance companies and their asset managers will be required to produce reports in greater detail than ever before. Our Solutions Service facilitates the production of investment accounting, regulatory, Solvency II-compliant and audit-ready reports for the insurance industry.
